## Drinking Water Quality Management Standard Quality Management System Policy Statement

Justice Dennis R. O'Connor, in Part Two of the Report of the Walkerton Inquiry, recommended the adoption of quality management for drinking-water systems. It was also recommended that a standard, specifically designed for drinking-water systems, be developed and implemented in Ontario. The Drinking Water Quality Management Standard (DWQMS) was implemented by the Province of Ontario to address Justice O'Connor's recommendation.

The Town of Lakeshore is committed to establishing and maintaining a drinking-water Quality Management System (QMS) that is compliant with the DWQMS to facilitate the provision of safe drinking-water to all consumers. As part of this commitment, the Town of Lakeshore also agrees to:

- Ensure that the drinking-water QMS appropriately addresses all aspects of the drinking-water system;
- Comply with all relevant legislative and regulatory requirements for the supply of safe drinking-water;
- Maintain and continually improve the drinking-water QMS; and
- Communicate pertinent operational and water quality information to the Owner of the drinking-water system, consumers, and the public on a regular basis.

Ongoing compliance and continual improvement of the QMS will be achieved through formalized processes. All internal and external communication regarding the drinking-water QMS will be conducted in accordance with the Communications Policy (OP-12).
